

MOTOR CITY SUPPLY GAME

Use this guide to set up, run, finish, and download one class session.

motorcity.boeingcenter.com

Before students arrive

- 1 Open the website. Under **Team session**, choose **Facilitate**.
- 2 Enter your name. Choose the active car models and resource plan.
- 3 Set the **Final round**, **WIP penalty round**, and optional round timer.
- 4 Press **Create session**. Save the long recovery code somewhere private.

Original 25-round Team Sequence: Yes, this is the exact predetermined v1 dice-roll sequence in the original order.

STEP 1

SET THE CLASS PLAN

CLASS PLAN

FINAL ROUND

10

Revenue counts through this round.

WIP PENALTY ROUND

10

Unfinished cars are measured here.

Custom timer example

Rounds 1 through 5

10 minutes

Rounds 6 through 10

5 minutes

- Turn on **Use a round timer** only when you want a countdown.
- Use **Add timing change** for another range.
- Use **Restore 10 / 3 min** for 10 minutes in rounds 1-8 and 3 minutes later.
- Every round must be covered. The website warns you about a gap.

At zero: remaining materials allocate, the student's board locks, and the student presses **Advance round**. The game never advances silently.

CONNECT AND START

Give students two things

1. The website: **motorcity.boeingcenter.com**
2. The six-character join code shown on your screen.

Students choose **Join**, enter the code and their name, then press **Join session**.

Check before starting

CONTROL

Check	What you should see
Players	The expected number of students
Final round	Your planned last scoring round
WIP round	Your planned penalty measurement round
Round timer	Off, or the timing ranges you entered

When the plan and roster look right, press **Start production**.

Recovery code: Keep the long facilitator recovery code private. For 12 hours, it restores your session and lets you reuse the same setup.

RUN THE CLASS

Your main controls

Control	Use it for
Present	Open the clean projector view.
Leaderboard	See live revenue standings.
Factory floor	See each student's progress and connection state.
Student name	Open that student's complete round history.
New code for [name]	Recover a student who lost their code or device.

When a timer expires

- 1 The student's timer reads **Time up**.
- 2 Remaining materials allocate automatically.
- 3 The board locks. The student presses **Advance round**.

Each student has an independent timer. Refreshing or rejoining does not reset it.

Keep the reveal intact: Live standings use revenue only. Students do not see WIP rates, monetary penalties, or projected final scores during play.

STEP 4

FINISH AND REVEAL

- 1 Check **Score up to round** and **Charge unfinished cars at round**.
- 2 Press **End production**, then **Yes, end it**.
- 3 On the projector, press **Charge the unfinished cars** when you are ready for the reveal.
- 4 Download **Excel workbook**.

What the workbook contains

- **Game Details:** setup, resource sequence, scoring rounds, timer, economics, and notes.
- **Player Overview:** revenue, penalty, final score, throughput, WIP, and identifier.
- **Game Stats:** low, high, median, and mean for the class.
- **One sheet per player:** every round, station, and resource movement.

IF SOMETHING GOES WRONG

My browser closed

Choose **Rejoin**. Enter the join code, your facilitator name, and your recovery code.

A student's browser closed

The student chooses **Rejoin** with their own recovery code. Their board and timer return.

A student lost the code

On that student's card, press **New code for [name]**. Read the new code to the student.

Someone joined by mistake

Press **Remove**, then confirm. Removal cannot be undone after the run ends.

The screen says offline

Pause and wait for **synced**. Do not repeat a command rapidly.

We need to end early

Lower both scoring fields to a round the class reached, then end the run.

Most important: Never share the facilitator recovery code with students. Download the Excel workbook before leaving the finished session.
